TASK 1- DIGITAL LITERACY

INFOGRAPHIC

Canva was used to create this vibrant infographic

Titled-Digital Literacy Essentials.

Canva is a user-friendly online design platform that

Enables quick creations of visuals like posters,

Infographics without advanced skills. It offers

Templates, drags and drops elements, bright colours

And icons making it ideal for educational content.

The infographic educates on core digital literacy

Skills for safe online navigations.

It divides into three pillars-Digital Ability (using

Tech, explaining files), Useful ChatGPT (thinking

Grammar and writing), Internet safety (strong

Unique passwords and VPN). Additional tips like

Public WIFI, Check HTTPS, emphasize security risks.

TASK 2- STUDENT DIGITAL PORTFOLIO

GITHUB-ACCOUNT

GitHub is a web-based platform that hosts Git repositories, enabling developers to store, manage, and collaborate on code. Build on Git-a distributed version control system-it tracks changes, allows branching, for parallel development.

It's widely used for collaboration via real-time edits and discussions, open-source contributions, and building portfolios.

LINKEDIN-PROFILE

LinkedIn is a professional social networking platform connecting over 1 billion users worldwide, for career growth and business opportunities. It functions like an online resume, where individuals showcase skills, experience, education and endorsements.

It's primarily used for job searching and recruitment, networking with peers and recruiters, company research, sharing industry insights, and professional development through groups, posts and events.

KAGGLE-PROFILE

Kaggle is a Google-owned platform for data scientists and machine learning enthusiasts. It serve as a hub for competitions, datasets, notebooks, and community collaboration.

It's used for entering real-world challenges sponsored by companies, accessing free datasets on topics like healthcare and finance, building and sharing ML models via cloud notebooks with GPU/TPU, learning through tutorials to showcase skills for jobs or portfolios.

HOW AM I GING TO USE THEM FOR NEXT FOUR YEARS

Over the next four years, I'll leverage GitHub, LinkedIn and Kaggle to build my AI/ML and programming portfolios. On GitHub, I'll host python projects, Prolog experiments and collaborative repos for courses, tracking progress with commits.

Kaggle will sharpen my skills through datasets, notebooks, and competitions in data science, earning badges for resumes.

LinkedIn will network with recruiters, alumni and pros, sharing projects and seeking internships in cybersecurity or AI.

Together, they'll boost internships, placements and skills amid college challenges.

TASK 3-CODING AND COLLABORATION PLATFORMS

The screenshot shows a CodeChef user profile for ADARSH TYAGI (ID: 25BCY10215). The profile includes a username 'major_tick_05', country 'India', and a 'Student/Professional' status of 'Other'. It also shows the 'CodeChef Pro Plan' as 'No Active Plan'. A 'Submissions Heat Map' for the last 6 months is displayed, showing activity across the months of September, October, November, December, January, February, and March. The right sidebar features 'Skill tests' (58% 'Getting Started'), 'CodeChef Rating' (instructions on how to get a rating), and 'Badges' (listing 'Code Enthusiast - No Badge' and 'Contest Contender - No Badge').

The screenshot shows a lesson completion screen for 'Output Operations'. It indicates that the user has completed 17 out of 17 concepts and solved 17 out of 21 problems. A notification shows '+75 XP gained' and '2% course completed'. There is a 'Keep Learning' button. Below this, a 'Test your knowledge' section encourages taking a test to cement learnings, with a 'Take Test' button. A 'Rate this Lesson?' section includes a 5-star rating system and a text box for feedback. At the bottom, a banner promotes unlocking all pro lessons of 'Learn Python for project building' and earning a certificate by upgrading to Pro.

Getting Started

⌚ 30 Minutes

Total time to attempt the assessment

📄 12 Questions

Programming problems and MCQs

👤 ADARSH TYAGI 25BCY10215

CodeChef Username: major_trick_05

IP - 139.167.143.182 (Allowed for this test)

Read the rules carefully before starting

- You can only attempt this assessment once.
- You will not be able to pause the assessment after starting.
- you are not allowed to switch tabs during the assessment, otherwise you will be blocked from the assessment.
- You will get a detailed report on your performance at the end of the assessment.

Attempt 2

☒ I agree to participate fairly in the assessment

Problem Specific Summary

Problem Name	Type	Max Score	Status	Score	Difficulty rating	Comments
Case Sensitive Print Command	MCQ	100	wrong	0	easy	You could have solved this one!
The Case of the Correct Print	MCQ	100	solved	100	easy	
Predict the Print Output	MCQ	100	solved	100	easy	

CODERCHEF is an Indian competitive programming platform, with over 5 million users worldwide. It hosts monthly contest, practice problems, from beginner to advance levels in languages like python, C++, structured courses on data structures, algorithms, SQL, and web development.

It is used by both students and professionals to sharpen problem-solving skills, climb rating/leaderboards for resumes, earn certificates and rewards, and access and online IDE for quick practice.

TASK 4-PROFESSIONAL EMIAL AND ETIQUETTE GUIDE

During a group project in computer science course, poor digital communication led to a disastrous outcome for five first year B.Tech students.

One member shared an outdated Python code file via WhatsApp without version notes or timestamps, causing the team to unknowingly build on buggy ML model logic. Misread emails threads about deadlines compounded the issue- ambiguous phrasing like 'submit by EOD' led half the group to upload late. The professor rejected the submission, leading to zeros, damage GPA's and heated arguments that fractured team trust.

This stemmed from low digital literacy-no use of shared Google Docs for real-time edits, absence of file naming conventions, and skipping tools like Slack channels for clarifications.

Better practices included mandating GitHub for version control with commit messages, clear slacked/discord etiquette for queries and digital literacy workshops on metadata, timestamps and collaborative platforms to prevent miscommunication and ensure timely, accurate submission.

TASK 5-CYBER CRIMINALISTICS

What surprised me most while researching cybercrimes like phishing and UPI fraud is how deceptively simple yet devastating they are for college students. I assumed technical hacks dominated, but stats from NCRB (2023) show 80% stem from social engineering—tricking trusting users via fake emails or SMS. Real cases, like the Delhi student's ₹45,000 loss from a bank alert scam, hit close to home. It's eye-opening that we're prime targets due to our digital-heavy lives (assignments, social media, payments) without enough skepticism.

As a result, one habit I'll personally change is mindlessly clicking links. From now on, I'll hover to verify URLs, enable strict UPI limits (₹2,000/day), and pause 5 minutes before acting on "urgent" alerts.
